OX BLOCK™ w/Swivel Eye 50061

The OX BLOCK™ is a rope snatchblock with an integrated friction bar used for:

- Hurtman/self-rescue
- Lowering
- Raising
- Snubbing loads.

It allows the rigging professional to handle loads with greater control. When lowering loads, tension is transferred from the worker to the OX BLOCK™.

The patented OX BLOCK™ replaces standard handline blocks, parted blocks and various snatch blocks; it also has greater WLLs than blocks of similar size.

When configured with optional pulleys, the OX BLOCK™ can be used to create a 4:1, 5:1 or 6:1 mechanical advantage reducing the amount of force needed to lift heavy loads.

The advantage of the pulleys used by Buckingham is the swivel side plate that allows for quick and easy rope installation without removing the pulley from the connecting device.
ASME B30 Compliant.

Now with a laser etched name option for security purposes; this feature will help deter theft of one of the most popular tools on the job-site today. If interested, please contact Buckingham Customer Service at **1-800-YES-BUCK** or via email at **Sales@BuckinghamMFG.com**.
